

# Residential Field Service Inspector

## Residential field service inspector app for iPads

Want to access service records while out in the field? Wastedge's iPad app helps council inspectors and field audit staff all over the country monitor operations and inspect resident sites far more efficiently.

It facilitates inspections and photo-audits of bin content or contamination and the completion of checklists on bin condition or presentation. **BEFORE the standard truck run.**

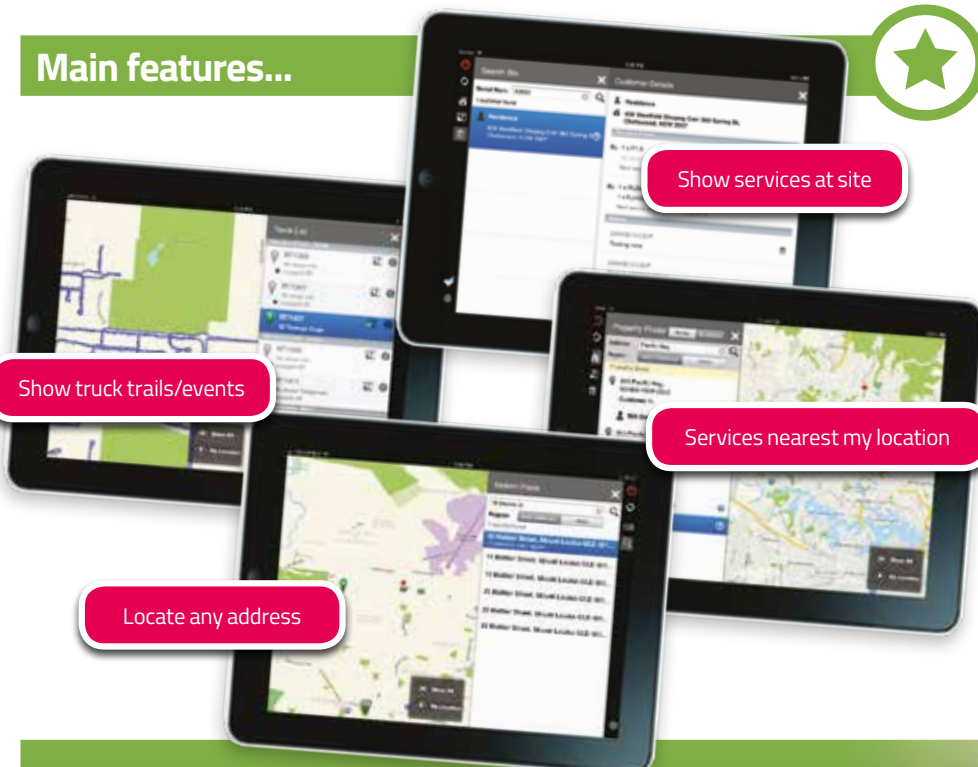

Driver-tagged site problem notes, complaints for lost/stolen/damaged bins or illegal dump sites can be easily investigated. And when stray bins are found, staff can simply **look up the bin serial number or Rfid tag to find out where they belong.**

Notes and photos can be added at the current GPS location or against a customer service address. And info can be requested about bin types/equipment registered against any property **All while on-site.**

User-defined inspection checklists allow workers to confirm completion of prescribed tasks, and **proof of inspection is date/time stamped.**

Council utility inspectors, property or health inspectors and asset management services will find this app handy too.

### Main features...

### Key benefits

- Reduces inspection/audit paperwork
- Links evidence photos to sites
- Facilitates ability to precede truck on run
- Improves customer service response times
- Web services can easily be linked to council systems
- Improves frontline staff communications
- Wastedge is a fully managed web service for mobiles (no requirement or burden on internal IT services)

### Additional features...

- Shows active trucks, locations and trails
- Shows selected route lift point history
- Shows driver incident spots from any run
- Queries what services are registered at any address
- Finds where any bin ID or Rfid tagged bin belongs
- Attaches photos and notes to locations
- Ticks off user-defined inspection checklists
