Waste Vehicle GPS Tracking Module

Web and mobile software

Wouldn't it be great to get better visibility of business activity with LESS admin effort and cost?

This Wastedge module helps you **easily capture GPS truck travel data** so you can see where your trucks are and where they've been. Truck start and end times, kilometres travelled and break times are automatically recorded every day so there's **no run sheets to manually fill in!**

When combined with signals from lift arm movements linked to customer geocoded locations or residential collection area boundaries and tip locations, this can automate statistics gathering as well as show where bins were lifted. **A great win for your business**.

Main features...

Truck day profiles GPS activity chart
See where trucks have been stationary outside tip geofences.

Key benefits

- Provides dispatcher visibility of truck progress
- Reduces driver and admin paperwork
- Helps highlight travel inefficiencies
- Auto-captures real bin locations data
- Provides evidence in accident claims

Additional features...

- Web-based display of truck locations
- Travel trail display and replay on demand
- Automates kilometres/time data capture
- Shows where truck is up to on a run
- Lift-arm link shows where bins lifted/left
- Provides residential presentation rates
- Automates statistics capture
- Records time leaving depot
- Records transit time to collection area
- Records time at each customer site
- Records time in/out of tip geofence
- Enables speed monitoring
- Provides evidence of driver breaks

"Having better visibility of truck location and progress allows dispatch operators to react faster to operational delays and incidents!"

Operations manager, 40 FEL trucks
